DETAILED ACTION

The restriction of the last Office action has been withdrawn. The combination as claimed in claim 1 does require the particulars of the subcombination claimed in claim 7. Therefore, claims 1-12 will be treated on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are replete with indefiniteness that is too numerous to point out in every instance. The following examples are provided for the applicant use in making corrections wherever appropriate but not specifically pointed to.

In several instances in the claims, the phrase "characterized in that" is recited. However, it is not clear how the phrase further structurally limit the claimed device.

Regarding claim 1, there is lack of antecedent basis for the limitation "head end face". It is not clear if the disc-like or flange-element consists or is a circular saw blade. Further, it is not clear whether the circular saw blade or chipping body is formed of the at least one groove or ridge.

Regarding claims 2, 3 and 9, it is not clear what is encompassed by the phrases "most advantageously" recited in claim 2 and "that multiple grooves and ridges are employed" recited in claims 3 and 9.

Art Unit: 3725

Regarding claim 4, it is not clear if the circular saw blade recited in the claim the same as the circular saw recited in line 6 of claim 1.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Nilsson (US Patent 3,645,308).

The device of Nilsson reads on the structural limitations of the claims including at least one groove or ridge formed on the circular saw blade (17) and a raised zone (18). The Examiner takes the position that the radial pitch of the grooves is adapted to comply with the rotating speed of the circular saw blade (col. 3, par. 1).
